

Light Line

Low Location Light Systems

Products:

TM Group has developed with specialists a superb working LLL system. Together with engineers which have worked and installed LLL systems on most famous cruiseliner all around the world, we have created our own LLL system.

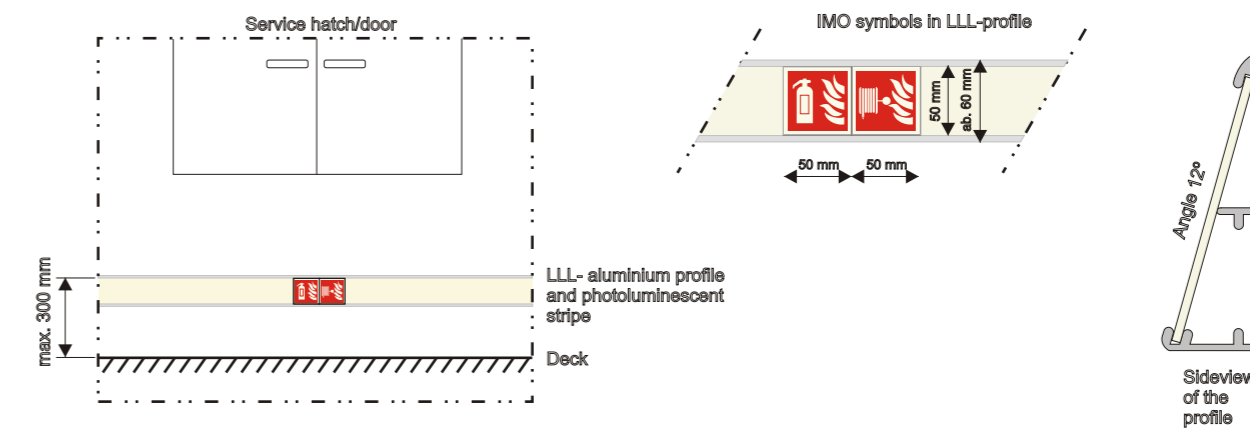

The standard system consists out of an angle aluminium profile with a 50 mm photoluminescent strip inside. The photoluminescent strip Toplight® is available in different qualities and will be offered according to the available light sources at site. The whole system is wheelmark approved by Bureau Veritas and complies fully with the ISO15370 and IMO A752(18) standards.

Services:

TM Group and its partners offers you the layout and engineering of the LLL system and also has approved and certified technicians for checking out these LLL systems. Engineering according to Fire plans of Cruiseliners and Ferries is our day to day job and we guarantee you our best possible service.

According to special wishes of Architects, Shipowners or the Yards we can also make custom fabric models with different profiles. As an example we can offer also "in carpet" profiles.

Lay out:

Quality:

Profiles: made according to ISO 9000 standards on customers demand

Strips: Wheelmark by Bureau Veritas approved acc to ISO15370

Installation: By qualified certified technicians

Guarantee: 5 years after installation
