

A lot of accidents in the industry are caused by the unexpected start of machines or equipment or by the uncontrolled actions of valves pumps etc.. These accidents can be prevented by proper LOCKOUT/TAGOUT procedures..

Lock out Systems are a safety procedure which should be implemented in your process, factory or utility during maintenance, refurbishment or construction procedures.

It is stipulated by international regulations (OSHA 1910.147, 89/655/EWG, UTE C 18-510 § 6.4.2) to use these systems and implement them in order to protect staff, contractors and equipment.

Lockout means to block the energy-source of a machine or to block the positions of switches or valves.

T-ISS offers a state of the art Locking-system which consists out of several different products like Padlocks , Valvecaps, Hasplocks, Cablelocks , Lockout-stations etc etc.

You think Safety is Expensive, try an Accident...!!!
